

Last month we announced that the new Matchless rocker boxes would be available from Roger Orford but we didn't have the selling prices at that time. These are universal to suit LH and RH cylinders on MX2 and MX4 engines. (mods. to oil feed piping required for MX2 engines).

Rocker box with cover, oil jets, seals and oil gallery blanking screws are £312.84 + VAT each

This month we are pleased to announce that the new MX2/MX4 rocker arms are now available from Roger Orford. These have been machined from aerospace grade alloy billet rather than from castings so they do look a little different. Previously the splines were formed by broaching but now they have been slotted on a CNC machine which has allowed the fit on the rocker spindles to be very slightly tighter. They are now a firm press fit on the spindles and should be heated up (hot air gun or boiling water) to ease fitment. This tighter fit should much reduce the likelihood of their working loose on the shaft splines in service.

There are four different rocker arms for each rocker box. RE188 & RE189 are the shorter internal, fixed arms (pushrod end) and RE190 & RE191 are the longer external, detachable arms (valve end). The part numbers have been CNC engraved on each one. Rocker arms can be bought individually or in sets of four. There is a discount when buying a set of four for a rocker box which also applies for either a set of four internal or external rocker arms. We anticipate that quite a few members (like me!) may wish to replace their external rocker arms which have become slack and clattery on the spindle splines over the years, making it difficult to maintain correct tappet clearances.

Internal rocker arm RE188 & RE189 and External rocker arm RE190 & RE191 are £36 each + VAT

Set of 4 rocker arms for 1 rocker box or for 4 Internal or 4 external rocker arms is £129.60 + VAT
